

Fogtrap<sup>®</sup> Hybrid90

# Daily Maintenance Log Book

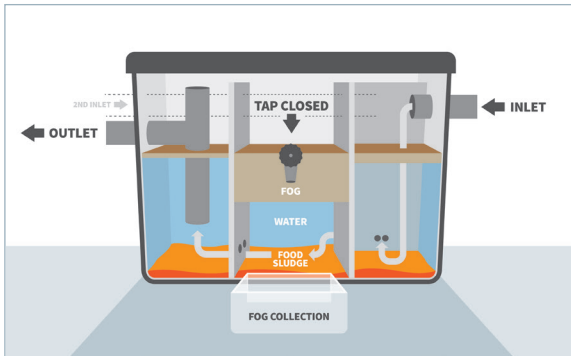

# Daily Maintenance

## Daily maintenance guide

Maintain your Fogtrap in 4 steps.

### Step 1

Place your collection container under the tap. Open the tap at the front by turning it anticlockwise.

### Step 2

Drain the FOG (fat, oil and grease) into your container until the liquid becomes clear water.

### Step 3

When water drains from the tap, stop the tap by turning it clockwise.

### Step 4

Empty your FOG container into an oil drum for collection by your designated oil contractor.

**PLEASE NOTE:** Following the Fogtrap replacement service, it may take a couple of days for the FOG to build up to the required drain off level.

Month: .....

To empty the Fogtrap® Hybrid, please refer to the front of the trap or alternatively, your Fogtrap® Maintenance Sheet for easy step by step instructions.
